

## **NEW!!! Water, Dust and Vibration Tested NEMA 4 Light Pipe**

The New LCS series of moisture sealed threaded lightpipes provides a method of transmitting light from a surface mount LED or T-1 3/4 LED to front panel display. The lens in the LCS series meets Nema 4 ratings and provides a seal against moisture, dust and vibration. The LCS increases the brightness and viewing angle of a LED. Lightpipe transmits the light from the source to the lens, which in turns disperses the light up to 180 degrees. Available in assorted lengths and lens colors.
