

ROHS COMPLIANT LED REMOVEABLE SOCKETS

With the introduction of RoHS compliant LED's and their sensitivity to heat, soldering them with higher temperature lead free soldering can be a problem.

We have a solution, the PCH 330, 440 and 660 solderless LED sockets allow easy final assembly for any LED or photo diode.

By soldering the socket to the PCB and then inserting the LED at final assembly stage insures that the LED or Photo diode is protected and working.

Call us today for a free sample of our RoHS compliant solderless LED sockets.
