

RVA Pushbuttons For Hygienic Applications

Schlegel's **RVA** control units are hand-operated electrical components with a mounting diameter of 22.3mm for use in rough service areas.

Special steel makes this series robust & corrosion-proof.

Coloured base rings make individual design possible.

The illuminated pushbuttons are equipped with an illuminated circular push-cap area.

These switches have an excellent feel which increases the operating comfort.

Through flexible contact arrangements & simple assembly this series can be used for all applications.

The surface of the push buttons can be inscribed by laser according to your requirements.

The RVA series from **Mimic Components** meets the requirements for hygienic applications.

* The types RVAT+TK & RVAHM can be used for hygienic applications without restrictions.

* The actuator types RVATM & RVAT have the following restrictions:

They are suitable for hygienic applications, provided the operator is not in direct contact with the processed food.
